WingX Pro7 Version 7.0 Delivers Advanced Weather from Baron Services, Enhances IFR Situational Awareness and Adds Pitot-Static Support

Parkland, FL -- July 17, 2013: Hilton Software LLC, a leader in advanced mobile aviation technology, today announced the availability of WingX Pro7 Version 7.0. The newest version of WingX Pro7 delivers the ability to graphically visualize both real-time and predictive weather information from Baron Services in a highly customizable interactive map. WingX Pro7, named Best iPad App of 2012 by Aviation Consumer Magazine, adds the ability to view a route line and breadcrumb trail on approach charts and to view pitot-static information on its moving map when using Levil's innovative iLevil AW. WingX Pro7 Version 7.0 continues to enhance and expand support for Civil Air Patrol and Coast Guard pilots with enhanced auto lat/lon capabilities to complement WingX Pro7's comprehensive grid and search pattern support. WingX Pro7's improvements also include simplified Favorites and Altitude Calibration – particularly useful when using either GPS Altitude or Pressure Altitude. WingX Pro7 is available immediately for download in the Apple App Store and is a free update for existing customers.

Advanced Weather from Baron Services

WingX Pro7 seamlessly integrates Baron Service's advanced weather with its award-winning moving map. This timely weather information is tailored to the pilot's planning and flying conditions enabling improved decision making. By using a simple settings pop-up, pilots can change the weather transparency, change the animation rate, and even change the weather resolution to reduce download bandwidth requirements – perfect for pilots at remote airports or using a hotel's slow network connection.

WingX Pro7 offers an impressive selection of Baron's industry-leading weather information which includes NEXRAD, Visible and IR Satellite, Echo Tops, Surface Analysis, and Contoured Surface Wind Speed just to name a few.

"Pilots deserve the most advanced aviation technology and weather graphics at their fingertips," said Dr. Goldstein, founder of Hilton Software LLC. "By working closely with Baron Services, we have combined two best-of-breed products to create an unbelievable aviation platform."

Route and Trail Overlays on Approach Charts

WingX Pro7 Version 7.0 gives pilots the ability to view their route and breadcrumb trail on approach charts. Pilots can add waypoints and fixes using ChartTouch™ directly on the approach chart and see their route line updated immediately on the approach chart thereby reducing workload and simplifying instrument flying.

Pitot-Static Support for Accurate Airspeed and Pressure Altitude

WingX Pro7 was the first major iPad app with ADS-B Weather and Traffic support. WingX Pro7 further expanded its external hardware capabilities by adding support for many more ADS-B receivers as well as AHRS and PCAS traffic systems. With Version 7.0, WingX Pro7 becomes the first major iPad app to add pitot-static support for the experimental market. “WingX Pro7’s support for the iLevel AW has a significant impact on the role of tablets in Experimental Aviation today,” says Ruben Leon, founder of Level Technology and EAA enthusiast. “The two systems combined offer everything I could ever dream of as an experimental pilot and I have never felt safer and more proud when flying my RV9.”

About Hilton Software LLC

Founded in 2003, Hilton Software LLC is a market-leader in the development of mobile aviation software for General Aviation, Commercial, and Military pilots. Hilton Software LLC partners include Cessna Aircraft, Baron Services, and AOPA. The company is expanding its line of successful products to make aviation safer, more affordable, and more efficient.
