

WingX® Pro7 for iPad adds Geo-Referenced Approach Charts

San Jose, CA - July 12, 2010: Hilton Software LLC, a leader in mobile moving map aviation software, announced another milestone in the WingX iPad revolution with the debut of Geo-Referenced Approach Charts. WingX Pro7 Version 4.1 brings considerable power, flexibility, and ease-of-use to pilots and reduces the cost well below that of dedicated GPS hardware.

Dr. Goldstein, founder of Hilton Software LLC says “My vision for the company is to provide affordable systems that rival and in many case surpass dedicated hardware units from the big-name GPS companies. I predict WingX Pro7 will start a trend, particularly in the LSA market, of aircraft manufacturers mounting an iPad on the panel instead of installing a much more expensive in-panel unit costing thousands of dollars. The side-by-side display of the Geo-Referenced Approach Charts and the Terrain-Aware Moving Map in WingX Pro7 Version 4.1 provides incredible situational awareness. The seamless integration of Seattle Avionics ChartData enables WingX Pro7 to show the aircraft’s position on an approach chart that is easily pannable and pinch zoomable. Having flown with WingX Pro7, I cannot imagine going back to using a dedicated GPS device with switches, knobs, and user manuals.”

WingX Pro7 also features an extensive A/FD, AOPA Directory with Yelp Integration, all the NACO/AeroNav approach charts on-board, our patented SmartTaxi™ technology, weather information, animated weather graphics, advanced route planning, superb DUATS integration, and much more.

WingX® products run on iPad, iPhone, iPod Touch, Android, BlackBerry, and Windows Mobile. Seattle Avionics ChartData requires a subscription from Seattle Avionics – see <http://seattleavionics.com/WingX>

Availability

WingX[®] Pro7 for iPad Version 4.1 is available now on the Apple App Store. For additional information about Hilton Software LLC or its products, please call 866-42-WINGX or email support@hiltonsoftware.com.
