Wearable WingX: WingX Pro7 for Pebble

Parkland, FL – March 4, 2014: Hilton Software LLC, a leader in advanced mobile aviation technology and well-known for leading the industry with impressive hardware support, today announced another first with the introduction of WingX Pro7 for Pebble. WingX Pro7 for Pebble uses a Bluetooth connection to seamlessly integrate with the award-winning WingX Pro7 running on an iPad or iPhone. Pebble watches have almost 5x the screen resolution of the new Garmin D2 yet are less than 1/2 of the weight and just 1/3 of the price.

WingX Pro7 for Pebble displays crucial navigation information including:

- GPS Speed, Track, Altitude, and WAAS flag
- Estimated Time Enroute (ETE), Estimated Time of Arrival (ETA), Desired Track (DTK), and Distance (NM or SM) simultaneously to the next waypoint and the destination
- Battery indicators for both the Pebble and the iPad or iPhone
- A configurable timer for timing fuel or instrument approaches

WingX Pro7 for Pebble provides four types of vibration warnings to the pilot:

- The timer has expired – useful for timing fuel tank changes or instrument approaches
- When passing a fix in the route – to prevent pilots from missing a turn or a step-down
- Pre-selected altitude warning – helpful in preventing pilot deviations
- Upon descending below 1,000' above field elevation – before-landing checklist reminder

Dr. Goldstein, founder of Hilton Software, explained: "At first I was skeptical of Pebble's use in aviation. Now I find its potential to be incredible. Pebble's e-paper screen is easy to read in bright sunlight, the timer is easy to use, and the navigation information is simple to understand. But what I find most intriguing is the vibration notification system. Pebble's vibration really gets your attention. For decades, designers have studied ways of alerting pilots – few of which have had much success. I believe that wearable devices provide a paradigm shift that may help us make measurable headway in reducing accident rates. Moreover, as we continue to expand WingX Pro7's reach into the system data bus of Boeing, Airbus, and various military aircraft, I envision a new breed of aircraft warning systems based upon wearable devices. As a military contractor that develops software for cramped airplane cockpits and helicopters, we are very excited about the potential that this new wearable technology has across the gamut of aviation."

WingX Pro7 for Pebble runs on Pebble and Pebble Steel and will be in the Pebble appstore later this month. The March update of WingX Pro7 for iOS is required (pending approval by Apple).

About Hilton Software LLC

Founded in 2003, Hilton Software LLC is a market-leader in the development of mobile aviation software for General Aviation, Commercial, and Military pilots. Hilton Software LLC is a military contractor and provides multi-platform mobile solutions for the US Military. Hilton Software LLC partners include Cessna Aircraft, Baron Services, and other best-of-breed companies. Hilton Software LLC is expanding its line of successful products to make aviation safer, more affordable, and more efficient. For more information, please visit www.hiltonsoftware.com.
